The lands set apart for original holdings in the year were 417,255 acres, representing 1,139 blocks.

**Retail Prices, Sydney.**—From the information collected as to average retail prices of food and groceries in Sydney it appears that during June, 1926, the prices of meat were 38 per cent. higher than in July, 1914; other food and groceries were 73½ per cent. higher; and the prices for the two combined were 63 per cent. higher.

The general level of prices showed a decrease of 2 per cent. compared with the previous month (May). Prices of meat were 3 per cent. cheaper than in May, and other food and groceries were 1½ per cent. cheaper. Cheese, bacon, eggs, milk, and potatoes were slightly cheaper.

Compared with the corresponding month (June) of 1925, meat was 5 per cent. cheaper; other food and groceries were 9½ per cent. dearer; and the two combined were 5½ per cent. dearer.

The commodities for which the price levels are computed are those in every-day consumption.

**New Buildings.**—*Metropolis.*—According to returns supplied by the several Town Clerks, the number of permits granted for new buildings to be erected in the Metropolis during the six months ended 30th June, 1926, numbered 5,197, as compared with 5,258 during the half year ended 30th June, 1925. *Country Municipalities.*—During the six months ended 30th June, 1926, permission was granted in country Municipalities to erect 3,678 new buildings, of the value of £2,204,371 as compared with 3,660 of a value of £2,075,028 during the six months ended 30th June, 1925.

**Meteorology.**—The very heavy rains late in March were followed during April by further good falls, which affected the greater part of New South Wales. The monthly rainfall exceeded the normal over all inland areas, except a few places near the western and northern borders and at several stations on the highlands. Torrential rain fell on the far north coast, twelve inches being registered at Murwillumbah during the first

five days. A disturbance assumed cyclonic character off the central and south coast on the 17th and 18th and rough weather with southerly gales hampered shipping. A remarkable phenomenon for its rarity in Australia was the tornado which struck the town of Trangie on the 6th April doing great damage. Frosts were experienced on parts of the Tablelands on several mornings and snow fell on the extreme southern Tablelands.

At Sydney the highest shade temperature was 85.0 degrees and the lowest 50.0 degrees. The rainfall for May was slightly below normal in most of the coastal areas, also on parts of the Northern and Southern Tablelands and Blue Mountains, at a few stations in the south-west, and over part of the western division. There were comparatively short periods of rough weather. The month was cool to cold and temperatures were slightly below normal.

Frosts were experienced on some mornings chiefly on the highlands and snow was reported on the extreme southern tablelands and on the Blue Mountains and northern tablelands. At Sydney rain totalled 29.4 points, the highest temperature was 74.8 degrees and the lowest 46.9 degrees. Fair to good rains fell over practically all the State during June.

The total monthly rainfall was above normal on the north coast and at some small scattered localities, but elsewhere it was below normal, although shortages were not great. Extensive frosts were experienced on a number of occasions and there was a marked prevalence of fogs, notably at Sydney where dense fogs were experienced every morning between the 15th and 23rd June.

Snow fell on the extreme southern tablelands on several occasions and on the northern tablelands.

At Sydney the rain totalled 14.2 points, the highest shade temperature was 70.3 degrees and the lowest 44.1 degrees.

**Labour Conditions in June Quarter, 1926.**—The following particulars in regard to employment and industrial dislocations have been taken from reports of the Department of Labour and Industry :—

*Employment.*—The Director of the State Labour Exchanges reports that at the end of June there were about 4,000 persons out of work in the metropolitan district, and about 4,500 in the country districts. The persons affected by unemployment included waterside workers, saddlers, wool and basil workers, tanners, coach painters, and bakers. Employment was good for carpenters, painters, engineering workers, tinsmiths, metal workers and shoe makers, and there was a scarcity of bricklayers, plasterers, plumbers, boilermakers, moulders, electrical workers, and textile workers, and of women for domestic work.

During the June quarter, 14,171 men and 1,125 women applied at the State Labour Exchanges for employment; 7,697 men and 2,101 women were sought by employers through the agency of the Exchanges, and 7,589 men and 1,610 women were placed in positions. In the previous quarter 15,305 persons applied for employment, 11,310 persons were sought by employers and 9,830 persons were placed in positions.

*Dislocations.*—During the June quarter 130,502 employees were involved in industrial dislocations owing to disputes, and the total loss amounted to 1,138,526 working days. In the previous quarter 43,252 employees were involved, with the loss of 257,434 days.

**Changes in Wages.**—There were increases in wages affected by Federal Awards during the June quarter, 1926.

**NOTE.**—The great majority of females engaged in rural occupations are employed in conjunction with domestic duties, very few being returned as working for wages. Since 1919 a more careful collection has been made of the number of females engaged in rural pursuits, and it would appear that previously about 12,000 females were included each year (e.g., wives of the proprietors) who were engaged wholly in domestic duties. The number of females quoted in the above table for years prior to 1920 represents, therefore, the number as returned, less 12,000.

## No. 52.—New South Wales Wheat Harvest, 1925-26.

The results were compiled from returns which were made after the crops had been harvested and depend upon statements furnished by each of 16,988 wheat-growers in the State.

The area sown for grain was 2,928,790 acres, including 75,528 acres which failed entirely.

The area sown for hay was 450,330 acres, including 6,123 acres which failed. The fed-off area was 277,820 acres, making a total of 3,656,940 acres sown with wheat.

The grain harvested amounted to 11,271,670 bags, equivalent to 33,815,000 bushels, or 11·5 bushels per acre.

The production of hay was 445,630 tons, or ·99 tons per acre.

In January, from an estimate based on returns supplied by the individual growers, it was anticipated that the yield of grain would be 11,247,000 bags, equivalent to 33,741,000 bushels, or 11·8 bushels per acre. This yield has been exceeded by 74,000 bushels.

Increased yields, compared with the January estimate, were obtained in the Central Tableland, North-western Slope, Central-western, Central Plain, and Riverina, and decreases in the Coast, Northern Tableland, Southern Tableland, South-western Slope, North Central Plain, and Western Division. These fluctuations are due partly to the uneven distribution of the rainfall during the season.

Of the total area harvested for grain, exclusive of the 75,528 acres which failed entirely, 81,212 acres were sown on new land; 1,464,683 acres on fallowed land, and the balance, 1,307,334 acres, on stubble, the respective productions of grain per acre being 11·1 bushels; 13·5 bushels; and 10·0 bushels.

The advantages of fallowing are again shown by the results obtained during the past season. The bulk of the area which failed entirely or was fed-off was stubble land. The figures disclose an appreciative increased yield per acre from fallowed land amounting to 35 per cent. over the stubble land.

The following table shows the actual results of the wheat harvest in the principal divisions of New South Wales:—
